

Center the dot for the perfect shot!

Thank you for purchasing the IQ Bowsight™ featuring revolutionary Retina Lock™ alignment technology!

STOP!!!! DO NOT ADJUST ANY OF THE RETINA MICRO ADJUSTMENTS!!!!

To set up your new IQ Bowsight™ please follow these easy instructions:

- 1) Mount the sight onto your bow like you would any other sight.
- 2) Sight in your first pin at your preferred distance (we recommend 20 yards) using the windage and elevation adjustments. **STOP** Do not adjust retina lock until you complete this step.
- 3) Once your top pin is accurately sighted in – it's time to adjust your Retina Lock™.
- 4) Draw your bow using the same form/anchor point used to set your top pin and look for the green Retina Lock™.
 - a) If you see the green Retina Lock™, adjust the black dot to the center of the Retina Lock™ using the micro adjustments located near the top and top side of sight (see diagram below). Remember you are adjusting the green Retina Lock™ to fit your form/anchor point. Repeat this step until the black dot is centered in the green Retina Lock™ – at your form/anchor point.
 - b) If you don't see the green Retina Lock™ at your form/anchor point you will need to move your anchor point up or down and possibly left or right until you find the green Retina Lock™. Once you've determined the direction of the green retina use the micro adjustments located near the top and top side of sight (see diagram below) to adjust the green Retina Lock™ to fit your form/anchor point. The micro adjustment on the top of the sight is to move the green Retina Lock™ up and down and the micro adjustment on the top side of sight is to move the green Retina Lock™ left and right – REMEMBER YOU ARE MOVING THE GREEN Retina Lock™. Repeat this step until the black dot is centered in the green Retina Lock™ – at your form/anchor point.

HOW TO ADJUST – if the green Retina Lock™ is high and to the right, you will need to move the adjustment low and to the left to try and center the black dot in the green Retina Lock™ at your form/anchor point. Repeat process as needed.

- 5) Once your black dot is centered in the green Retina Lock™ AT YOUR FORM/ANCHOR POINT it's time to sight in the rest of your pins!
